

## CHLOROPLASTS

What is the function of chloroplasts?

What is photosynthesis?

What is an autotroph?

List the chemical equation for photosynthesis and what each stands for:

In what cells are chloroplasts only found in (plant cell or animal cell?)

What is chlorophyll?

What is ATP? What would happen if we did not have it?

List the two phases of photosynthesis:

Why do we need photosynthesis?

If we did not have photosynthesis would we die? Explain.
